PROFESSIONAL SUMMARY

Aspiring AI-Enabled Data Scientist currently pursuing an Integrated MSc (IT) at GLS University. Skilled in Python, SQL, Pandas, NumPy, Scikit-learn, FastAPI, REST API development, Machine Learning, Deep Learning, and Agentic AI, with hands-on experience using AI tools such as ChatGPT, Claude, and Gemini. Built and deployed machine learning prediction applications and Agentic AI workflow chatbots involving data preprocessing, predictive modeling, API development, database integration, and AI-driven workflow automation.

TECHNICAL SKILLS

Languages & Querying: *.Python, SQL (MySQL)*

Data Analysis & ML Libraries: *[Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Statistics, Machine Learning, Deep Learning*

AI & Agentic AIs : *Agentic AI, AI Agents, RAG, LangChain, Agentic Workflows, Prompt Engineering*

AI Tools & Platforms: *ChatGPT, Claude, Gemini, Groq*

Development & Deployment: *FastAPI, REST APIs, Docker, Git, GitHub, Render*

PROJECTS

Project 1 | ***PIronPulse — Machine Failure Prediction with Imbalanced Data***

Tech Stack: *Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, SMOTE, Machine Learning*

Dataset: *AI4I 2020 Predictive Maintenance Dataset — 10,000+ industrial machine records, with a highly imbalanced failure target*

GitHub: *https://github.com/code-ninja42/ai-powered-predictive-maintenance*

Built a machine failure prediction model to identify potential equipment failures, focusing on handling severe class imbalance to improve detection of rare failure cases.

- *Data Processing: Cleaned and preprocessed 10,000+ machine records, handled categorical features using Label Encoding, and analyzed the distribution of failure types*
- *Imbalanced Learning: Compared class weighting, SMOTE, and scale_pos_weight approaches to improve minority-class prediction, evaluating models using Precision, Recall, F1-score, and PR-AUC*

- **AI Integration:** *Used ChatGPT and Claude to assist with debugging, model evaluation, feature-engineering approaches, and understanding imbalanced-learning techniques*

Project 2 | *AI-Powered E-Commerce Agentic Chatbot*

Tech Stack: *Python, FastAPI, LangChain, Groq, React, REST APIs, MySQL, TiDB Cloud, Redis, Docker, Render*

Dataset: *Cloud-hosted TiDB Cloud MySQL-compatible database containing product and order information*

Live Link: https://chatbot-0xzi.onrender.com/

GitHub: *https://github.com/code-ninja42/chatbot?utm_source=chatgpt.com*

Built and deployed an Agentic AI e-commerce chatbot that uses tool calling to retrieve real-time product and order information instead of relying on manually written responses.

- *Developed a LangChain-based AI agent with tool-calling capabilities that determines when to retrieve product or order data through FastAPI REST APIs.*
- *Integrated TiDB Cloud with the FastAPI backend to provide database-grounded responses for product details, pricing, and order tracking*
- *Deployed the React frontend and FastAPI backend on Render, using Groq as the LLM and implementing an agentic workflow for automated query handling.*

AI Integration: *Used ChatGPT during development to explore the system architecture, including cloud database options such as TiDB Cloud, and to troubleshoot LLM, LangChain, API, and deployment issues; implemented and tested the final workflow using Groq*

.**Project 3 | *Student Placement Prediction***

Tech Stack: *Python, Pandas, NumPy, Scikit-learn, CatBoost, Random Forest, Logistic Regression, Matplotlib, Seaborn*

Dataset: *10,000 student records containing academic, skill, and placement-related attribute]*

Live Link: *https://placement-prediction-api-dcdj.onrender.com*

GitHub: *https://github.com/code-ninja42/placement_prediction?utm_source=chatgpt.com*

Built a machine learning classification system to predict student placement outcomes based on academic and other student-related features.]

- *Data Processing: Cleaned and preprocessed 10,000 records, identified and handled 72 duplicate records, and prepared features for classification modeling.*
- *Model Evaluation: Compared Logistic Regression, Random Forest, and CatBoost models and evaluated their performance using accuracy, with the models achieving approximately 79% accuracy.*
- **AI Integration:** *Used ChatGPT during development to assist with debugging, understanding model behavior, preprocessing decisions, and improving the machine learning workflow.*

EDUCATION

Integrated MSc (IT) — GLS University

Bachelor's in Information Technology (BSc IT)
GLS University
2026 • CGPA: 8.04

Master’s in Information Technology (MSc IT) — Ongoing
GLS University

CERTIFICATIONS

- ***[Data Science with AI Certification — TOPS Technologies (2026)] —*** *[ongoing]*

LANGUAGES

[English (Professional), Hindi (Native), Gujarati (Native)]
